DIGITAL LITERACY

PROJECT REPORT

Submitted By: Sumed Kumar

Registration Number:25BAI10256

Course: B.Tech CSE (AIML)

Course Code: CSE0001

School :SCAI

Introduction :-

In today's fast-changing digital world, digital literacy has become an essential skill for students. It is not only about using technology but also about using it safely, responsibly, and effectively. This project was designed to help students undertand different aspects of digital literacy through practical tasks.

As a Student Digital Ambassador, I worked on five tasks that include creating an infographic, building a digital portfolio, exploring coding and collaboration tools, learning professional communication, and understanding cybercrime awareness. Each task provided hands-on experience with real digital tools.

The project is organized in a GitHub repository, which also helped me learn how to manage and present work professionally online. Overall, this project improved my technical skills, awareness, and confidence in using digital platforms.

Task 1: Digital Literacy Infographic :-

I created my digital literacy infographic using Canva because it is a simple and user-friendly tool that provides a variety of templates and design elements. The infographic is titled "Understanding Digital Literacy" and it explains the concept in a clear and visually engaging way.

My design includes different sections such as the meaning of digital literacy, essential digital tools like Google Wrkspace and coding platforms, safe internet practices, email etiquette, and building a professional online presence. Each section contains short and easy-to-understand points along with icons and colors to make the content more attractive and readable. The goal was to present important information in a way that students can quickly understand and remember.

One thing I found interesting while making this infographic was how design choices like colors, layout, and icons can make information more effective. However, the most difficult part was selecting the right amount of content, as including too much information made the design look crowded. Overall, this task helped me improve both my creativity and my understanding of digital literacy concepts.

Task 2: Digital Portfolio :-

In this task, I created my digital portfolio by setting up profiles on platforms like GitHub, LinkedIn, and Kaggle. These platforms are important for building a professional online presence.

On GitHub, I created a profile README to introduce myself and share my learning goals. On LinkedIn, I added my education details and started building a professional profile.

Kaggle provides opportunities to learn and practice data-related skills.

This tasks helped me understand the importance of maintaining a professional identity online. Many companies and recruiters check online profiles before offering internships or jobs. Therefore, having a well-maintained profile is very important.

In the future, I plan to regularly update my profiles, upload projects on GitHub, and connect with professionals on LinkedIn. This will help me build a strong career foundation and improve my opportunities.

Task 3: Coding & Collaboration Platforms :-

In this task, I explored both coding platforms and collaboration tools. I used HackerRank to solve a beginner-level problem, which helped me understand the structure of coding challenges and improve my problem-solving skills.

For collaboration, I created a Google Form titled “Digital Literacy Awareness Quiz.” The form contains five questions related to digital literacy, including multiple-choice and short-answer questions. I also viewed the responses using Google Sheets, which helped me understand how data is collected and analyzed.

This task showed me how digital tools can be used effectively for learning and collaboration. Coding platforms help in improving programming skills, while tools like Google Forms are useful for surveys and quizzes.

Overall, this task enhanced my technical knowledge and introduced me to useful tools that will help me in my academic journey.

Task 4: Email Etiquette & Communication :-

In this task, I learned about professional communication and email etiquette. I wrote two formal emails: one requesting an assignment deadline extension and another applying for a summer internship.

I ensured that both emails had a clear subject line, proper greeting, well-structured body, and polite closing. I also created a checklist of social media do's and don'ts to promote responsible online behavior.

Poor digital communication can create misunderstandings and affect one's reputation. For exampe, using informal language or not following proper structure can make an email look unprofessional.

This task helped me understand the importance of clear, respectful, and structured communication in both academic and professional environments.

Task 5: Cybercrime Awareness :-

In this task, I studied UPI fraud as a common cybercrime in India. UPI fraud happens when attackers trick users into sharing sensitive information or making payments through fake requests.

I created a case study explaining how such frauds occur and who is usually targeted. I also prepared a prevention checklist that includes safety tips like not sharing OTPs, avoiding suspicious links, and verifying transactions.

I included important reporting channels such as the National Cyber Crime Portal and helpline number 1930.

This task increased my awareness of online threats and taught me how to stay safe while using digital platforms.

Conclusion :-

This project helped me understand the importance of digital literacy in today's world. I learned how to use digital tools, create a professional online presence, communicate effectively, and stay safe from cyber threats. Each task provided practical knowledge and improved my confidence.

The skills I gained will be useful in my academic journey and future career. Overall, this project was a valuable experience that enhanced my understanding of the digital world.
